

## Research study

### **Stratification of Clinically Vulnerable People for COVID-19 Risk Using Antibody Testing (STRAVINSKY)**

We are conducting a study to determine whether an antibody test result can predict who has the greatest risk of severe COVID-19 infection in clinically vulnerable patients.

Your participation in this study will involve a simple blood spot test, performed at home, to check for the presence of COVID-19 antibodies.

If you choose to participate, you will be asked to provide a blood sample on 4 different occasions over 12 months. This result will be returned to you.

You will be able to consent for this study by yourself using an electronic link.

If you are interested in taking part, please email [STRAVINSKY@contacts.bham.ac.uk](mailto:STRAVINSKY@contacts.bham.ac.uk) or call us on xxxxxxxx.
